## Description

PowerPlex ${ }^{\circledR}$ Keypads are compact PowerPlex ${ }^{\circledR}$ operating units for DC 12 V and DC 24 V applications. Each individual key is freely configurable. A range of versatile colouring of the individual keys is available. The key symbols are provided by means of slide-in foils.

PowerPlex ${ }^{\circledR}$ is a decentralized electrical power distribution system. All PowerPlex ${ }^{\circledR}$ Modules ensure, alone or in combination with other PowerPlex ${ }^{\circledR}$ components, reliable control and monitoring of all installed electrical devices and functions. They protect loads and harness against overcurrent. In addition the modules are used to collect sensor data from level and temperature sensors as well as shunt resistors. Outputs for dimming of electrical loads are also available.

By means of the PowerPlex ${ }^{\circledR}$ configuration software, the applica-tion-specific logics for power distribution, power control and power monitoring will be defined, stored or adjusted. Communication takes place via the PowerPlex ${ }^{\circledR}$ CAN, based on SAE J1939.

## Typical applications

- Buses, special vehicles, mobile homes etc.
- Watercraft, e.g. leisure boats, workboats

## Features and Benefits

- Compact and light-weight design
- Freely configurable control of electrical loads
- Protection against overload, short circuit and reverse polarity
- LED backlighting of keys
- Status monitoring by means of configurable LED colour change of the keys
- User-defined key legends through slide-in foils
- Dimming optional, e.g. for energy-saving or night operation
- Chemical resistance against various agents

## Part numbers:

- Series-100 - only keys
